NEWS RELEASE

Always Compassionate Home Care launches in home FLU VACCINE services for its patients and caregivers.

New York, NY- With the protection of our patients and caregivers as our highest priority, Always Compassionate Home Care has launched an in-home service where our clinical infusion nurses can provide the flu vaccine in patient's homes. This in-home clinical service will be enhanced later this fall as we expand our service to include the ability to perform rapid Covid-19 testing and rapid Flu A&B testing. When available, we will seek to administer the Coronavirus vaccine in the home as well. Administering the Coronavirus vaccine in the home is contingent upon its approval by the FDA, its release to the public, and publication of appropriate NYSDOH regulations.

While the elderly and medically fragile are cautioned to stay home in response to the Coronavirus pandemic, Always Compassionate's mission to keep our patients safe in their homes has never been more important. As we move to the fall months ahead, we are greatly concerned that this flu season has the potential to become exaggerated by the confluence of the influenza, the Coronavirus and the common cold. Without home care and the recommended precautions, our clients risk infection and hospitalization, necessitating visits to physicians' offices and hospitals with already strained resources and increased risk of contracting other infections.

Always Compassionate is able to provide these critical public health services by combining its unique clinical team and forward-thinking approach to home care in New York. This approach combines the capabilities of an associated pharmacy that has procured the vaccine and partners with Always Compassionate's clinical care division and personal care division, which include clinical infusion nurses and personal care aides.

Always Compassionate is guided by the belief that the future of a more efficient and high quality home health care system depends largely on: i) achieving scale of operations; ii) digitalizing information to enable the full spectrum of the care system to operate seamlessly and to efficiently provide necessary patient information to all various participants and care managers; iii) integrating various skills and regulatory capabilities like private duty nursing including therapists, personal care aides and a pharmacy to develop alternative treatment/care models allowing a larger portion of the elderly and medically fragile to be cared for in their homes; and iv) assembling a highly professional team of clinical and administrative staff enabling our organization to successfully operate our company.

Always Compassionate Home Care is expanding its footprint in New York through ongoing consolidation efforts that will allow the company to offer a growing amount of cutting-edge and high-quality community-based homecare services to New Yorkers. The company's technological aptitude will enhance each patient's quality of life through actionable analytics and an efficient platform for the delivery of care. This platform is operating on a state of the art fully digitalized information system, made capable by a multi-million dollar investment.
